Objective

As a Computer Science student and passionate in coding, my main goal is to learn the best practices I can and apply them as soon as possible. I am also interested in being part of a team that supports all kinds of ideas and enjoys the daily challenges by searching for solutions instead of blaming other people. The learning path will always be difficult, but in the right place, it could be riching and delightful.

Skills

Git and Github: some practice with the repository system and basic knowledge about good practices.

C++: intermediate knowledge about the programming essentials. That's what I use in college.

HTML/CSS: capable of creating a nice user interface.

SQL: MySQL Knowledge of some basic queries. I can handle myself.

JavaScript: mostly vanilla; able to work with the DOM, still learning the core of frontend development to tackle new technoledges, such as React, Angular or some other modern framework.

Education

Universidade do Vale do Itajaí (UNIVALI) – Campus Kabrasol.

Course: Ciência da Computação. Period: 4st. Shift: nocturn (19:00 to 22:30).
